Board of Directors
Ridge Park Luxury Condominiums Owners' Association Inc.
Los Alamos, New Mexico

Please find attached your reserve study report. This version was generated from association CSV source files using a Python-to-LaTeX workflow so that the report can be reproduced, updated, and audited from the underlying data package.

The report is intended to mirror the structure and feel of a conventional reserve study: a cover page, statement of position, component summaries, annual funding projections, expenditure schedules, and supporting disclosures. The purpose is not to imitate the original preparer's authorship, but to provide a transparent and reusable reporting format driven directly by the uploaded reserve data.

The reserve model remains a planning tool rather than a prediction of exact future outcomes. Actual repair timing, pricing, inflation, and investment returns will differ from the assumptions used here. The goal is to keep the association approximately funded at approximately the right time and to make long-range reserve decisions easier to review.

Sincerely,

Brendan J. Gifford
Ridge Park Treasurer

Ridge Park Luxury Condominiums Owners' Association Inc.

Preparer's Report on Reserve Study

Description of Engagement and Report

This report was generated from the uploaded CSV data package for the association. The workflow reads the reserve assumptions, component inventory, replacement schedule, annual contribution plan, and reserve cash-flow projection, then renders a formatted LaTeX report designed to resemble a traditional reserve study binder. It is intended as a reproducible reporting layer over the association's source data.

Management's Responsibility

Management remains responsible for the assumptions underlying the reserve model, including inflation, investment return, beginning reserve balance, component scope, useful life estimates, replacement timing, and any planned contribution or special assessment strategy.

Generator Responsibility

The generator's responsibility is limited to organizing the supplied data into financial exhibits, narrative disclosures, and summary schedules. It does not perform a site inspection, engineering opinion, destructive testing, or warranty analysis.

Important Limitations

This report should be read together with the source CSV package. If the underlying source data changes, the PDF should be regenerated so that tables and summary metrics remain aligned with the current model.

This document was not prepared by a credentialed professional. It is best treated as a transparent analytical report, not as a substitute for a professional reserve study.

Statement of Position

Projection period:	2026 to 2055
Type of project:	Reserve Study
Number of units:	138
Location:	Los Alamos, New Mexico
Project construction date:	1984
Analysis date:	January 1, 2026
Report prepared by:	Brendan J. Gifford, Treasurer

Metric	Value
Current Replacement Cost	$6,283,484
Future Replacement Cost	$8,723,989
Current Reserve Fund Balance	$800,000
Fully Funded Reserve Balance	$3,426,289
Percent Funded	23.35 %
Reserve Deficit	$2,626,289
Reserve Deficit per Unit	$19,031
Projected Annual Reserve Contribution	$250,000
Average Annual Reserve Contribution per Unit	$1,812
Projected Monthly Reserve Contribution	$20,833
Average Monthly Reserve Contribution per Unit	$151

First-year reserve contribution: $250,000. First-year ending balance: $757,274. Ending balance in the final projection year (2055): $10,227,048.

Summary of Major Components

Analysis Date - January 1, 2026 Inflation: 3.00% Investment: 2.50% Contribution Factor: 0.00

Category	Useful Lives	Replacement Years	Remaining Years	Future Cost
Roofing	5-30	2030-2040	4:06-14:06	$2,582,679
Exterior Surfaces	7-30	2026-2040	0:06-14:06	$2,481,562

Disclosures

- This report was generated from current component inventory and condition, projected expenditures, annual contribution schedules, and reserve cash-flow projections.
- Analysis date: January 1, 2026. Projection horizon: 30 years.
- Inflation assumption used in the model: 3.00%.
- Investment return assumption used in the model: 2.50%.
- Beginning reserve balance used in the projection: $800,000.
- While component replacement timing and cost estimates are best guesses, actual field conditions may cause different timing or scope.
- This document is formatted to resemble a conventional reserve study using custom Python-based software designed and written by Brendan J. Gifford rather than from proprietary reserve-study software.
- Readers should review contribution levels, projected expenditures, and percent-funded results together. No single table should be interpreted in isolation.
